

PROJECT PROFILE

John Perry Children's Centre

Solution: Custom Design
Type: Design and Install
Location: Dagenham Essex

Provides much needed shade to the building whilst creating **UV and rain protection** for the children's play areas

Sun protection combined with building shading

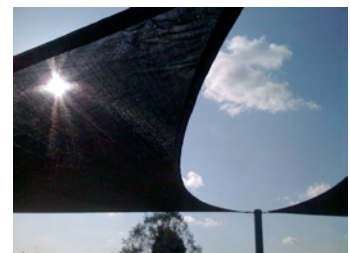

Project Brief

The John Perry Children's centre wished to develop a multifunctional canopy to provide essential shade to cool the new building, create shaded play areas and an area protected from rain to allow children a 'free flow' of movement from inside to outside the centre.

Solution

Fabric Ten custom designed a tensile fabric structure using a combination of knitted HDPE shade fabric and 720 gms Ferrari PVC fabric to provide the desired shade, cooling and rain protection.

The inclined pole design maximises the shade impact and creates an architectural solution which enhances the aesthetic of this award winning building.
